

Patent Application of Kern C. Barthol for "Japanese Character Text Automotive Lamp" continued – Page 11

ABSTRACT: An automotive lamp with a housing (**10**) that is of sufficient size and shape so that it may properly fit its respected vehicle in which it was intended to be mounted upon. At the rear of the lamp are sufficient housing attachment devices (**12**) in the exact positions as the original factory automotive lamp as well as adequate electrical lighting component attachment points (**16**) for the respected vehicle's original electrical lighting components (**18**). On the interior of the housing (**10**) of the lamp are light shaping channels (**14**) which are used to display a number, word, or any combination of the two in Japanese character text (**14**).
